

H6-590mm Autoprop fitted to twin Yanmar 4JH3THE engines

Dear David

Sorry for the late answer! We are extremely busy at the moment testing and documenting the yacht and all of its systems. I have a few trial data for you though:

The yacht is doing: 8.5 knots @ 2000 rpm
 9.3 knots @ 2300 rpm
 11.0 knots @ 3500 rpm

RPMs referring to engine revs. on both engines, reduction: 3.03:1.

The yacht just came back to the yard a week ago from a 3-week test-cruise with the owner and his family and friends. The owner and we are satisfied with the yachts abilities under power and with the absence of propeller noise.

For more info and pictures please take a look at our website: www.x-yachts.com

I hope this helps you.

Best regards,

Thomas Mielec
